

HUG Lagos/Ibadan Terraform Challenge Week One Project

Project 1 – Deploy a Basic Web Server on a Cloud Platform.

Objective: Provision a simple web server on a Cloud Platform using Terraform.

Learning Outcomes

- Configure the Cloud Platform provider.
- Use variables and outputs.
- Provision cloud resources using Infrastructure As Code.
- Understand resource dependencies.

Requirements: Using Terraform, provision

- A custom VPC
- A Public Subnet
- An Internet Gateway
- A Route Table
- A Security Group allowing:
 - SSH (22)
 - HTTP (80)
- A Compute (Instance) in the public subnet
- Configure the Compute (Instance) using the respective boot script(e.g., user_data) to:
 - Install Nginx
 - Serve a simple HTML page displaying:
 - Your Full Name (Firstname, Lastname)
 - HUG Lagos/Ibadan Terraform Challenge

Deliverables

- Terraform code (GitHub Link).
- README with deployment instructions.
- Screenshot of the Webpage.
- Screenshot of the Cloud Platform Console showing the Compute (Instance) running.
- LinkedIn Post(explaining your thought process of the project implementation, tagging HUG Lagos and HUG Ibadan).
